Sprint Goals

Learn the Existing Codebase

- Learn Docker
- Learn Django
- Familiarize Ourselves with the Codebase

Fix Existing Issues

- Docker Cleanup
- Readability Improvements
- Functionality Restoration

Implementation of New Features

- Geolocation
- Feedback
- Text to Speech
- Query Suggestion
- Improved Logging

Major Achievements - Willem Evanson

Location Feature

Query location to improve responses and improve feedback

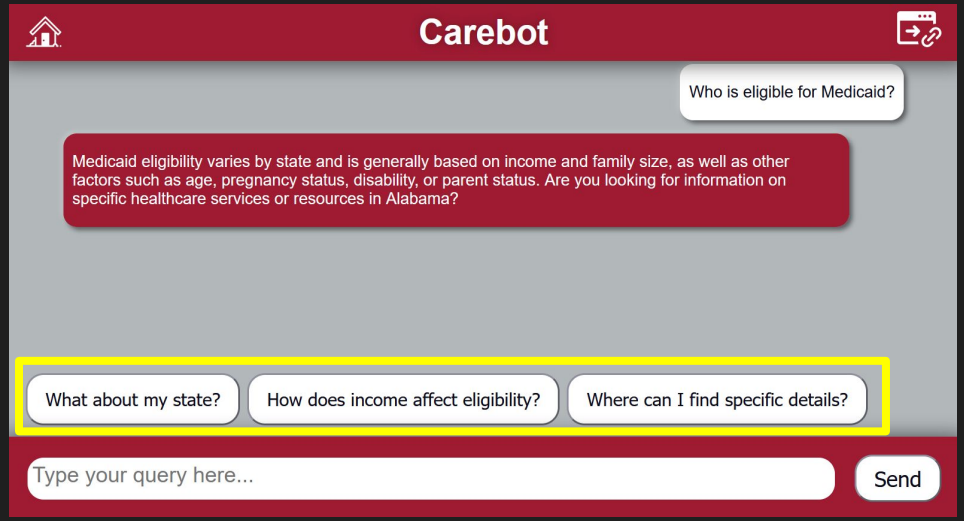
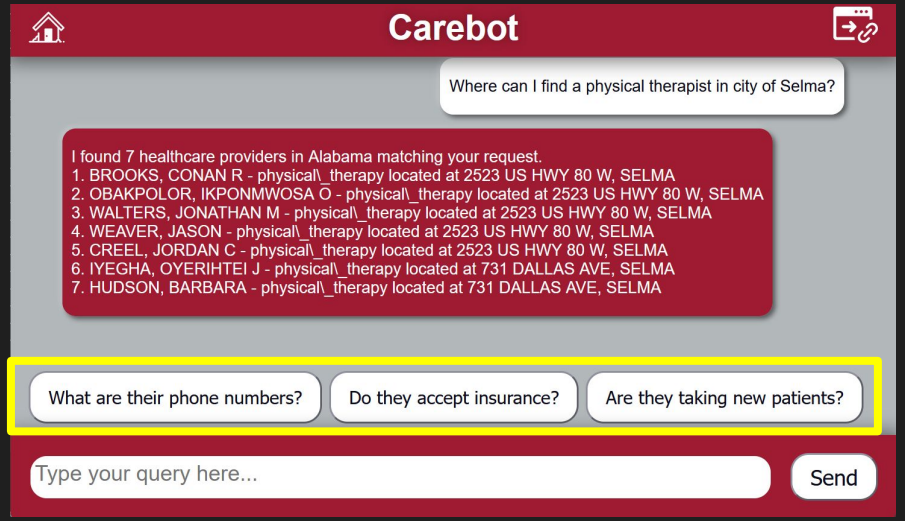
Feature

The feature I worked on is adding a feedback section to the chatbot after a response to the user is given. Soon feedback will be

Major Achievements - Walt Wilber





Dynamic Query Suggestions

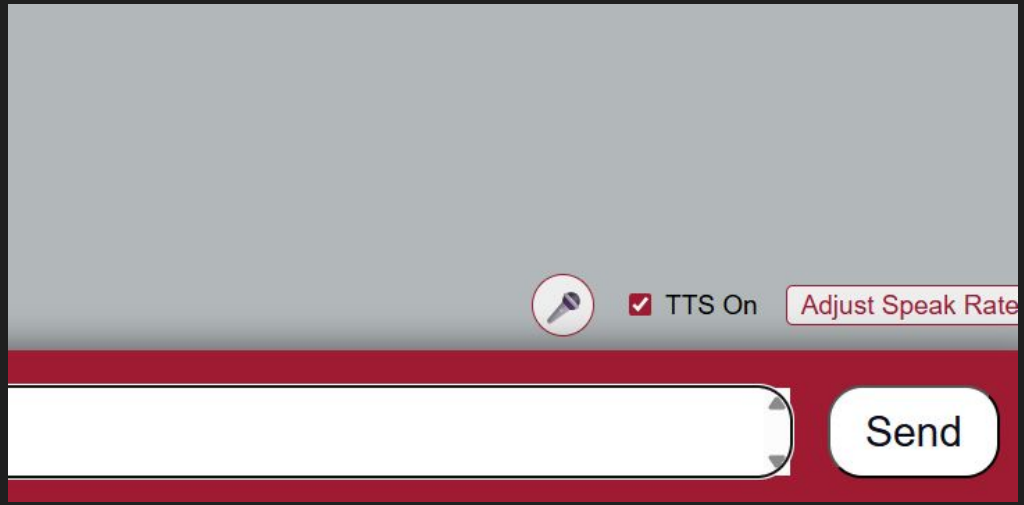
Generate potential follow-up queries that users can click to ask the bot

Major Achievements - Christian Meraz-Santiago

Text-to-Speech and Voice Recognition

This feature gives the chatbot text-to-speech and speech-to-text capabilities to create more accessible conversations.

It uses the Web Speech API, and has a simple ui to manage features.



Key Feedback

Improve Data Collection

- Gather data such as user feedback and geolocation
- Enable searching/filtering of past conversations for analysis
- Investigate future backend analytics

Maximize Ease of Use

- Consider potential pain points for inexperienced users
- Improve accessibility in the user interface

Uncompleted Items & Lessons Learned

Not Completed

- Feedback needs backend analytics
- TTS and speech recognition is adding a playback feature and possible API change

Lessons Learned

- Good documentation is needed for future groups and developers
- Robust dev environments are important to avoid problems later
